

## 10 WATT LAMP & BALLAST

The 10W Sölarc® lamps are specifically designed for battery-powered applications. Some of these lamps have industry-standard aluminum reflectors coated for maximum reflectivity in visible applications. The following specifications illustrate reflectorized lamp performance, except for the M10N001 which is a single-ended lamp (SEL).

### Application Information

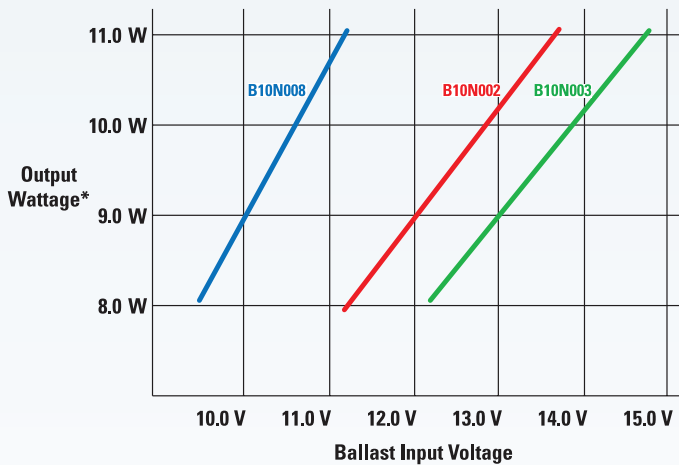

**Orientation:** Lamp performance is specified in horizontal orientation. Lamp may be operated in other orientations although some variation in performance will occur.

**Cooling:** Lamp performance measured under laboratory conditions. Actual performance may vary depending on application. Special attention should be paid to the lamp's operating thermal environment.

### Notes

1. It is recommended that all applications be properly fused with a 2 A fuse.
2. Heat sinking the ballast will provide optimal efficiency and operation.
3. For applications where the ballast is located 6 inches or further from the power source it is important that its wires be continuously twisted to prevent voltage spikes. Additional filtering may be needed if the distance to the power source is longer than 6 inches or the source has high impedance characteristics.

\*Output wattage measured after lamp/ballast reach steady state operating temperatures.

**IMPORTANT!** Running the lamp above 11 watts or below 8 watts for an extended period is not recommended.
